1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage , etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

— IMPORTANT —

THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUTED PERSON.

— LASER DIODE CHARACTERISTICS —

MAXIMUM OUTPUT POWER: 32 mw
WAVELENGTH: 785 nm

LABEL CHECK

MY and MY/GR/FR types

— Additional Laser Caution —

Laser pick-up assembly

The output power at the objective lens of this assembly is 0.73 mW.

Control method of the current through a laser diode.

The resistor R105 on the CORD MAIN UNIT ASSY (For MD mechanism assembly) are for the limiting of current through a laser diode.

Control method of the laser output power

The laser pick-up assembly provide the photo-diodes and APC (Auto Power Control) circuit.

The photo-diode detect output of the laser diode then IC104 control the APC circuit according to the signal voltage of the photo-diode via IC101.

The Variable resistancer on the FPC in the Laser pick-up assembly can be adjusted the output level of Laser diode to fix the rated output level.

Laser Interlock Switch

The loading position detect switch S101 is set to "LOAD ON" (ON: low level, OFF: high level) position, IC104 get the "LOAD" signal, and hand the laser "LDON" signal to No. 9 terminal (LDON) of the Laser pick-up assembly.

Then a laser diode can be lighted expt when the level of signal "LOAD" is low.

* Refer to page 42.

2. EXPLODED VIEWS AND PARTS LIST

- NOTES :
- Parts marked by “ NSP ” are generally unavailable because they are not in our Master Spare Parts List.
 - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Screw adjacent to ▼ mark on the product are used for disassembly.

2.1 PACKING

(1) PACKING PARTS LIST

Mark	No.	Description	Part No.
	1	Protector (F)	RHA1238
	2	Protector (R)	RHA1239
	3	Packing Case	See Contrast table (2)
	4	Sheet (750 × 600 × 0.5)	Z23-007
	5	Audio Cord (L= 1m)	PDE1248
	6	Remote Control Unit (CU-MJ011)	RPX1131
	7	Battery Cover	RZN1156
NSP	8	Batteries (AA/R6P)	VEM-013
	9	Polyethylene Bag (0.03 × 230 × 340)	Z21-038

Waveforms

Note: The encircled numbers denote measuring point in the schematic diagram and the PCB connection diagram.

4. PCB CONNECTION DIAGRAM

NOTE FOR PCB DIAGRAMS :

- 1. Part numbers in PCB diagrams match those in the schematic diagrams.
- 2. A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol In PCB Diagrams	Symbol In Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

- 3. The parts mounted on this PCB include all necessary parts for several destinations.
- For further information for respective destinations, be sure to check with the schematic diagram.
- 4. View point of PCB diagrams.

5. PCB PARTS LIST

NOTES : ● Parts marked by “ NSP ” are generally unavailable because they are not in our Master Spare Parts List.

- The $\triangle$ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by $J = 5\%$, and $K = 10\%$).

$560\ \Omega \rightarrow 56 \times 10^1 \rightarrow 561$ RD1/4PU $\begin{matrix} 5 & 6 & 1 \\ \hline \end{matrix} J$

$47k\ \Omega \rightarrow 47 \times 10^3 \rightarrow 473$ RD1/4PU $\begin{matrix} 4 & 7 & 3 \\ \hline \end{matrix} J$

$0.5\ \Omega \rightarrow R50$ RN2H $\begin{matrix} R & 5 & 0 \\ \hline \end{matrix} K$

$1\ \Omega \rightarrow 1R0$ RS1P $\begin{matrix} 1 & R & 0 \\ \hline \end{matrix} K$

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

$5.62k\ \Omega \rightarrow 562 \times 10^1 \rightarrow 5621$ RN1/4PC $\begin{matrix} 5 & 6 & 2 & 1 \\ \hline \end{matrix} F$

6. ADJUSTMENT

■ JIGS AND MEASURING INSTRUMENTS

- Thermometer

- Oscilloscope

- Optical Power Meter

- Jitter Meter

- Test Disc

For servo system adjustment GGF1328 (MMD-212)

For recording/playback inspection GGF1328 (MMD-212), GGF1277,
TGYS1 (or MMD-110), Commercial discs

6.1 NECESSARY ADJUSTMENT POINTS

When		Adjustment points
Exchange PICKUP	➡	③, ④ → Page 44, 45
Exchange Servo Base Assy (SPINDLE MOTOR)	➡	③, ④ → Page 44, 45
Exchange CORE MAIN UNIT ASSY	➡	④ → Page 44, 45
Exchange MD HEAD	➡	_____
Exchange Loading Mechanism Assy	➡	_____
Exchange Servo Mechanism Assy	➡	③, ④ → Page 44, 45
Exchange MD Mechanism Assy (Loading Mechanism Assy + Servo Mechanism Assy)	➡	③, ④ → Page 44, 45

6.2 TEST MODE

There are two test modes: test mode 1 for main unit operation check and test mode 2 for MD mechanism assy adjustment and check.

6.2.1 Test Mode 1 (main unit operation check)

■ How to enter into test mode 1

- 1) Hold the “ENTER” key and the “STOP” key depressed and press the POWER switch.
- 2) SYSTEM TEST will be displayed on the FL display.

● Operation check for the operation keys

Operation Keys	FL Display	Contents
REC (●)		Same operation as in normal mode
PLAY (▶)		
STOP (■)		
JOG (◀◀, ▶▶)		
CUE (▶▶)		
REV (◀◀)		
EJECT (▲)		Disc ejection (no TOC writing)
DIGITAL-NR	D S P O K ! !	Normal DSP IC operation
	D S P E R R O R 1	Communication between the DSP IC and the system controller is not possible.
	D S P E R R O R 2	Calculation in the DSP IC not correct

● Operation check for other keys

When each key is pressed, display according to the following table shall be made on the FL display.

Operation Keys		FL Display
TIMER SW	OFF	S Y S T E M T E S T
	REC	Entire FL lit
	PLAY	Entire FL not lit
A-B		A - B
REPEAT		R E P E A T
PLAY MODE		P L A Y M O D E
TIME SKIP		T I M E S K I P
NAME CLIP		N A M E C L I P
DISPLAY/CHARA		D I S P
REC MODE		R E C M O D E

Operation Keys	FL Display
JOG (Push)	E N T E R
EDIT/NO	E D I T / N O
NAME	N A M E
SYNCHRO REC	S Y N C H R O R E C

■ Cancellation of Test Mode 1

Press the POWER switch.

6.2.2 Test Mode 2 (MD Mechanism Assy Adjustment, Check)

① Temperature Check (Please perform this check soon after the power has been switched on.)

Note: When IC101 (RF-AMP) or IC104 (mechanical controller) has been exchanged or when a correction changing VD+3 has been made, be sure to correctly perform all steps up to step 7.

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks												
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode													
2	Press the NAME CLIP key.	TEMP ○○□□	The microcomputer starts measuring.	○○: Measuring value □□: Set value												
3	When □□ is 80 or more at this time, the adjustment is OK (step 4 and following can be omitted).		End													
When □□ is 80 (not passed)		TEMP ○○ 8 0	80 is the default value (unadjusted).													
4	Measure the ambient temperature T (°C) and check that the measuring value (○○) is within the standard in regard to the microcomputer set value (□□). Note: When the indication of the measuring value (○○) is not stable, and the ambient temperature T (°C) is 25 °C or less, set to the lower value. When the ambient temperature is over 25 °C, set to the higher value.	TEMP ○○□□ μ-com Measuring value ↑ μ-com Set value <table><tr><th>Room Temperature [T (°C)]</th><th>hex= (○○-□□)</th></tr><tr><td>11.6 to 16.9</td><td>+1 to +3</td></tr><tr><td>17.0 to 22.3</td><td>0 to +2</td></tr><tr><td>22.4 to 27.6</td><td>-1 to +1</td></tr><tr><td>27.7 to 33.0</td><td>0 to -2</td></tr><tr><td>33.1 to 38.4</td><td>-1 to -3</td></tr></table> When the microcomputer value is 7B ↑ - 7A 7C ↓ + 7D			Room Temperature [T (°C)]	hex= (○○-□□)	11.6 to 16.9	+1 to +3	17.0 to 22.3	0 to +2	22.4 to 27.6	-1 to +1	27.7 to 33.0	0 to -2	33.1 to 38.4	-1 to -3
Room Temperature [T (°C)]	hex= (○○-□□)															
11.6 to 16.9	+1 to +3															
17.0 to 22.3	0 to +2															
22.4 to 27.6	-1 to +1															
27.7 to 33.0	0 to -2															
33.1 to 38.4	-1 to -3															
5	Change □□ with the TIME SKIP key (UP) and the A-B key (DOWN).	TEMP 7B 7B														
6	Press the EDIT/NO key.	No Disc	Writing to EEPROM is made and return is made automatically from test mode to normal mode.													

② Laser Power Check

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks								
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode	Laser Wavelength: 780 nm								
2	Press the NAME key.	ppw	PLAY power output status									
3	Measure the laser power with an optical power meter.	ppw										
4	At this time, check that the measuring value (PLAY power) meets the standard value of the table on the right. Note: When the standard value on the right is applied, the numerical value immediately after entry into test mode 2 shall be taken as the standard.	ppw	μ-com TEMP ○○□□ μ-com Measuring value ↑ ↑ Set value <table><tr><td>hex = (○○ – □□)</td><td>Standard Value (mW)</td></tr><tr><td>+02 to +04</td><td>0.69±0.12</td></tr><tr><td>–01 to +01</td><td>0.67±0.1</td></tr><tr><td>–02 to –04</td><td>0.63±0.1</td></tr></table>	hex = (○○ – □□)	Standard Value (mW)	+02 to +04	0.69±0.12	–01 to +01	0.67±0.1	–02 to –04	0.63±0.1	May be omitted.
hex = (○○ – □□)	Standard Value (mW)											
+02 to +04	0.69±0.12											
–01 to +01	0.67±0.1											
–02 to –04	0.63±0.1											
5	Press the NAME key.	rpw	REC power output status									
6	At this time, check that the measuring value (REC power) meets the standard value of the table on the right.	rpw	<table><tr><td>hex = (○○ – □□)</td><td>Standard Value (mW)</td></tr><tr><td>+02 to +04</td><td>6.18±0.93</td></tr><tr><td>–01 to +01</td><td>5.79±0.87</td></tr><tr><td>–02 to –04</td><td>5.47±0.82</td></tr></table>	hex = (○○ – □□)	Standard Value (mW)	+02 to +04	6.18±0.93	–01 to +01	5.79±0.87	–02 to –04	5.47±0.82	
hex = (○○ – □□)	Standard Value (mW)											
+02 to +04	6.18±0.93											
–01 to +01	5.79±0.87											
–02 to –04	5.47±0.82											
7	Press the STOP key.		The LD goes out.									

③ Grating Adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode	
2	Insert the test disc GGF1328 (MMD-212).	LOADING GRT AJST	Grating adjustment status	
3	Press the PLAY key.	LON : LAG : GEG :	Playback is started in tracking open status. (The servo is closed only for focus and spindle.)	
4	Connect an oscilloscope according to the following connection diagram and loosen the screw (A) at the side of the adjustment hole. Turn the hole with a screwdriver until the Lissajous waveform becomes as shown in the figure, and then tighten the screw (A).	GRT AJST	Lissajous waveform a:b = Within 3:1	
5	Press the STOP key.		Adjustment end	

Connection Diagram

④ Preliminary Adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode	
2	Insert the test disc GGF1328 (MMD-212).	LOADING GRT AJST		
3	Press the REC MODE key (until RST YOBI is displayed).	RST YOBI		
4	Press the PLAY key.		Preliminary adjustment result display mode	
5	Press the REC MODE key several times and display the GTG (GROOV TRACKING GAIN) value.	GTG : □		
6	Use the TIME SKIP key (UP) and the A-B key (DOWN) to adjust the value of □ to 4 or more.	GTG : 4		

④ Preliminary Adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
7	Press the STOP key.	RST YOBI	Return to menu display	
8	Press the REC MODE key (until AUT YOBI is displayed).	AUT YOBI	Preliminary adjustment mode	
9	Preliminary adjustment starts when the PLAY key is pressed.	HAo : LAg : PTG : Can't ADJ. COMPLETE	Defective adjustment (problem with the servo system) Adjustment end	
10	Press the STOP key.	AUT YOBI	Return to menu display	
11	Press the EDIT/NO key.	EEPROM W Toc Reading GGF1328 (MMD-212)	Writing to the EEPROM	

Note: When this adjustment is performed after defocus adjustment has been performed, defocus is returned to the initial status, and defocus adjustment must be performed.

⑤ Normal adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode	
2	Insert the test disc GGF1328 (MMD-212).	LOADING GRT AJST		
3	Press the REC MODE key (until AUTO AJST is displayed).	AUTO AJST	Normal adjustment mode	
4	Normal adjustment starts when the PLAY key is pressed.	PEG : HAG : Can't ADJ. COMPLETE	Defective adjustment (problem with the servo system) Adjustment end	
5	Press the STOP key.	AUTO AJST	Return to menu display	

⑥ Defocus adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode	
2	Insert the test disc GGF1328 (MMD-212).	LOADING GRT AJST		
3	Press the REC MODE key (until deFO AJST is displayed).	deFO AJST		
4	Press the PLAY key. of  Defocus Value $\uparrow$ C1 Error Value $\uparrow$	PEG : FESpp : of000c0015	Defocus mode is entered, and after automatic execution of normal adjustment, the C1 error at the time of focus offset 0 is displayed.	
5	Check the jitter value and end the adjustment when the intermediate jitter value is 29 nsec or less.			
6	Press the NAME CLIP key.	of+04 c0032	The C1 error with application of a focus offset of about 0.4 μm on the + side is displayed. The jitter value (J+) at this time is recorded.	

⑥ Defocus adjustment

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks
7	Press the NAME CLIP key.	of-04 c0020	The C1 error with application of a focus offset of about 0.4 μm on the – side is displayed. The jitter value (J–) at this time is recorded.	
8	When J+ is larger than J–, press the REC MODE key and display the C1 error when the focus offset is applied up to +0.4 μm . (Do nothing when J– is larger than J+.)	of+04 c0032		
9	Change the value with CUE (◀◀)/REV (◀◀) until the value becomes the same.	of+04 c0032 of+03 c0025 of+02 c0020	When the smaller offset of the jitter value has been corrected mistakenly, press the NAME key and return to step 4.	
10	Press the PLAY key.	COMPLETE	The mean value of the changed set value and the offset of the other setting limit is written into the EEPROM as the compensation offset.	
11	Power OFF		Test mode is ended.	

Connection diagram

⑦ Jitter/C1 Error Check at the time of Playback

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks						
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode							
2	Insert the test disc GGF1328 (MMD-212).	LOADING GRT AJST								
3	Perform “ ■ Normal Adjustment ” (step 3, step 4).	AUTO AJST								
4	Press the NAME CLIP key.	TEST PLAY	TEST PLAY mode							
5	Press the NAME key and display the inner circumference address.	ADRES 0050								
6	Press the PLAY key and display the C1 error for the inner circumference.	a0050 c0015	Check that the jitter value meets the standard value of the following table. GGF1328 (MMD-212) jitter value <table><tr><td>Inner circumference</td><td>31 nsec or less</td></tr><tr><td>Intermediate circumference</td><td>29 nsec or less</td></tr><tr><td>Outer circumference</td><td>29 nsec or less</td></tr></table>	Inner circumference	31 nsec or less	Intermediate circumference	29 nsec or less	Outer circumference	29 nsec or less	
Inner circumference	31 nsec or less									
Intermediate circumference	29 nsec or less									
Outer circumference	29 nsec or less									
7	Press the REC key.	A0062 c0013 AVE. c0012	Seven data are acquired, the largest and the smallest value are discarded, and fixed display is made for the mean value of the remaining five data. Check that this value is 200 or less.							

⑦ Jitter/C1 Error Check at the time of Playback

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks						
8	Press the REC key.	a006F c0017	The fixed display of the C1 error is ended.							
9	Press the STOP key.	TEST PLAY								
10	Press the NAME key and display the inner circumference address.	ADRES 0050		Intermediate and outer circumference may be omitted.						
11	Press the NAME CLIP key and display the intermediate circumference address. Perform steps 6 to 9 in this condition.	ADRES 03C0 a03C0 c0009 TEST PLAY								
12	Press the NAME key and display the inner circumference address.	ADRES 0050								
13	Press the NAME CLIP key twice to display the outer circumference address. Perform steps 6 to 9 in this condition.	ADRES 0700 a0700 c0008 TEST PLAY								
14	Press the EJECT key, eject the test disc GGF1328 (MMD-212), and insert TGYS1 (or MMD-110.)	EJECT LOADING GRT AJST								
15	Perform steps 3 to 13 and check the jitter/C1 error with the test disc TGYS1 (or MMD-110).	a0062 c0009 a03d2 c0007 a0712 c0006	Check that the jitter value meets the standard value of the following table. TGYS1 (or MMD-110) jitter value <table><tr><td>Inner circumference</td><td>29 nsec or less</td></tr><tr><td>Intermediate circumference</td><td>27 nsec or less</td></tr><tr><td>Outer circumference</td><td>27 nsec or less</td></tr></table>	Inner circumference	29 nsec or less	Intermediate circumference	27 nsec or less	Outer circumference	27 nsec or less	
Inner circumference	29 nsec or less									
Intermediate circumference	27 nsec or less									
Outer circumference	27 nsec or less									
16	Press the EJECT key.	EJECT	The test disc TGYS1 (or MMD-110) is ejected.							
17	Power OFF		Test mode is ended.							

Connection diagram

■ Jitter/C1 Error Check at the time of Recording/Playback

Step No.	Operation Keys and Operation Method	FL Display	Status	Remarks						
1	Power ON while holding the ENTER key and the PLAY key depressed.	EJECT	Test mode							
2	Insert the test disc (GGF1277).	LOADING GRT AJST								
3	Perform “ ■ Normal Adjustment ” (step 3, step 4).	AUTO AJST								
4	Press the NAME CLIP key twice.	TEST REC	TEST REC mode							
5	Press the NAME key and display the inner circumference address.	a0050 pw0D								
6	When the PLAY key is pressed, TEST REC starts, and when 25 addresses or more have been sent, stop by pressing the STOP key.	a0069 pw0D TEST REC	Note: When the initial address (0050) part of the inner circumference (or intermediate/ outer circumference) has been used 1000 times or more, press the CUE key and shift the address by 10hex. (The address is shifted (up to 10 times) according to the use frequency of the disc.)	Intermediate and outer circumference may be omitted.						
7	Press the NAME key and display the inner circumference address.	a0050 pw0D								
8	Press the NAME CLIP key and display the intermediate circumference.	a03C0 pw0D								
9	Perform step 6.	a03D9 pw0D TEST REC								
10	Press the NAME key and display the inner circumference address.	a0050 pw0D								
11	Press the NAME CLIP key twice and display the outer circumference address.	a0700 pw0D								
12	Perform step 6.	a0719 pw0D TEST REC								
13	Press the NAME CLIP key.	TEST PLAY	TEST PLAY mode							
14	Perform steps 5 to 13 of “ ■ Jitter/C1 Error Check at the time of Playback ”. At the time of self-recording, wait for seven addresses after TEST PLAY start, and then press the REC key and enter into mean value mode. (Good recording may not be possible for several addresses at the beginning.)	a0069 c0009 a03D9 c0007 a0719 c0006	Check the jitter/C2 error at the inner/ intermediate/outer circumference of GGF1277, and check that the jitter value satisfies the standard value of the following table. GGF1277 jitter value <table><tr><td>Inner circumference</td><td>33 nsec or less</td></tr><tr><td>Intermediate circumference</td><td>31 nsec or less</td></tr><tr><td>Outer circumference</td><td>31 nsec or less</td></tr></table>	Inner circumference	33 nsec or less	Intermediate circumference	31 nsec or less	Outer circumference	31 nsec or less	
Inner circumference	33 nsec or less									
Intermediate circumference	31 nsec or less									
Outer circumference	31 nsec or less									
15	Press the EJECT key.	EJECT	The test disc (GGF1277) is ejected.							
16	Power OFF		Test mode is ended.

● Pin Function

No.	Name	I/O	Description
1 to 7, 100	P96 to P90, P97	I/O	These are 8 bit I/O ports with the same functions as P0. By software selection, it functions as the input terminals for the timers B0 to B2, the output terminals for the D/A converter, the expansion input terminals of the A/D converter, or the A/D trigger input terminals.
8	BYTE	I	This is the terminal for switching the external data bus width. When the level of this terminal is "L", the width is 16 bits, and when it is "H", the width is 8 bits. Please fix it to one of these levels. At the time of single-chip mode, connect it to the Vss terminal.
9	CNVss	I	This is the terminal for processor mode switching. At the time of single-chip mode or at the time of memory expansion mode, connect it to the Vss terminal. At the time of microprocessor mode, connect it to the Vcc terminal.
10 11 17 18 to 22	P87 P86 P85 P84 to P80	I/O I/O I I/O	P80 to P84, P86, and P87 are I/O ports with the same functions as P0. By software selection, they function as the I/O terminals for the timer A4 or the input terminals for external interrupt. P86 and P87 function by software selection as the I/O terminals for the subclock oscillation circuit. In this case, connect a crystal oscillator between P86 (XCOUT terminal) and P87 (XCIN terminal). P85 is an input-only port serving also as $\overline{\text{NMI}}$. When the input of this terminal changes from "H" to "L", and $\overline{\text{NMI}}$ interrupt is generated. The $\overline{\text{NMI}}$ function can not be cancelled by software. A pullup resistance can not be set for this terminal.
12	$\overline{\text{RESET}}$	I	When the input to this terminal is "L", the microcomputer is reset.
13	XOUT	I	These are the I/O terminals of the main clock oscillation circuit. Connect a ceramic oscillator or a crystal oscillator between the terminals XIN and XOUT. In case of an externally generated clock, enter the clock from the XIN terminal and leave the XOUT terminal open.
15	XIN	O	
14	Vss	—	Impress 0 V.
16	Vcc	—	Impress 2.7 V to 5.5 V.
23 to 30	P77 to P70	I/O	These are 8 bit I/O ports with the same functions as P0. By software selection, they function as the I/O terminals for the timers A0 to A3.
31 to 38	P67 to P60	I/O	These are 8 bit I/O ports with the same functions as P0. By software selection, they function as the I/O terminals for the UART0 and UART1.
39 to 46	P57 to P50	I/O	These are 8 bit I/O ports with the same functions as P0. By software selection, they put out a clock with 1/8 or 1/32 of XIN or with the same cycle as XCIN from P57.
	WRL/WR, WRH/BHE, RD, BCLK, HLDA, HOLD, ALE, RDY	O O O O O I O I	WRL, WRH, (WR, BHE), RD, BCLK, HLDA, and ALE signals are put out. Switching between $\overline{\text{WRL}}$ and $\overline{\text{WRH}}$ and between BHE and WR is possible by software. ■ At the time of WRL, WRH, RD selection When the external data bus width is 16 bits and the $\overline{\text{WRL}}$ signal is at "L" level, writing is done to an even address, and the $\overline{\text{WRH}}$ signal is at "L" level, writing is done to an odd address. Reading is performed when the $\overline{\text{RD}}$ signal is at "L" level. ■ At the time of WR, BHE, RD selection Writing is done when the WR signal is at "L" level. Reading is done when the RD signal is at "L" level. An odd address is accessed when the BHE signal is at "L" level. Please use this mode when the external data bus width is 8 bits. The microcomputer is in hold status while the input level to the HOLD terminal is "L". During hold status, the output from HLDA is at "L" level. ALE is the signal for address latching. The microcomputer is in ready status while the input to RDY is at "L" level. A clock with the same frequency as the internal clock ϕ is put out from the BCLK terminal.
47 to 54	P47 to P40	I/O	These are 8 bit I/O ports with the same functions as P0.
	$\overline{\text{CS3}}$ to $\overline{\text{CS0}}$, A19 to A16	O O	The A16 to A19 and $\overline{\text{CS0}}$ to $\overline{\text{CS3}}$ signals are put out. A16 to A19 are the upper 4 bits of the address. $\overline{\text{CS0}}$ to $\overline{\text{CS3}}$ are the chip select signals, and they are used for specification of the access space.

No.	Name	I/O	Description
55 to 61, 63	P37 to P31, P30	I/O	These are 8 bit I/O ports with the same functions as P0.
	A15 to A9, A8	O	The middle 8 bits (A8 to A15) of the address are put out.
	A15 to A9 A8/D7	I/O O	With an external data bus width of 16 bits and multiplex bus setting, time sharing is performed for data (D7) I/O and address (A8) output. Address (A9 to A15) output also is performed.
62	Vcc	—	Impress 2.7 V to 5.5 V.
64	Vss	—	Impress 0 V.
65 to 72	P27 to P20	I/O	These are 8 bit I/O ports with the same functions as P0.
	A7 to A0	O	Output of the lower 8 bits (A0 to A7) of the address is performed.
	A7/D7 to A0/D0	I/O	With an external data bus width of 16 bits and multiplex bus setting, time sharing is performed for data (D0 to D7) I/O and address lower 8 bits (A0 to A7) output.
	A0 A7/D6 to A1/D0	O I/O	With an external data bus width of 16 bits and multiplex bus setting, time sharing is performed for data (D0 to D6) I/O and address (A1 to A7) output. Address (A0) output also is performed.
73 to 80	P17 to P10	I/O	These are 8 bit I/O ports with the same functions as P0.
	D15 to D8	I/O	Data (D8 to D15) I/O is performed at the time of separate bus setting.
81 to 88	P07 to P00	I/O	These are CMOS 8 bit I/O ports. They have direction registers for I/O selection, and input or output port setting is possible individually for each terminal. For an input port, the existence or absence of a pull-up resistance can be set by software in 4 bit units.
	D7 to D0	I/O	Data (D0 to D7) I/O is performed at the time of separate bus setting.
89 to 95, 97	P107 to P101, P100	I/O	This are 8 bit I/O ports with the same functions as P0. By software selection, they function as input terminals of the A/D converter. P104 to P107 also function as input terminals for the key input interrupt function.
96	AVss	—	This is the A/D converter power supply input terminal. Please connect it to the Vss terminal.
98	VREF	I	This is the A/D converter reference voltage input terminal.
99	AVcc	—	This is the A/D converter power supply input terminal. Please connect it to the Vcc terminal.

● Pin Function

No.	Name	I/O	Description
1*	EFMMON	O	EFM monitor output
2	AVCC	–	Analog power supply
3	EFMI	I	EFM signal input from RF amp
4	AGND	–	Analog GND
5	AIN	I	Focus error signal A
6	EIN	I	Tracking error signal E
7	TCG	I	Track cross signal
8	BIN	I	Focus error signal B
9	FIN	I	Tracking error signal F
10*	VBAT	I	Power-supply voltage detection signal for constant-voltage servo
11	WBI	I	ADIP wobble signal
12	VDD1	–	Digital power supply
13	DGND	–	Digital GND
14	TEST0	I	Test-use input; normally connected to GND when used.
15	TEST1	I	
16	TEST2	I	Test-use input; Encoder/Servo Mode and ATRAC Mode changeover

No.	Name	I/O	Description
17	X176KO	O	Clock output; f = 176.4kHz (4fs)
18	FODRF	O	Focus servo forward output; PWM
19	FODRR	O	Focus servo reverse output; PWM
20	TRDRF	O	Tracking servo forward output; PWM
21	TRDRR	O	Tracking servo reverse output; PWM
22	SLDRF	O	Slide servo forward output; PWM
23	SLDRR	O	Slide servo reverse output; PWM
24	SPDRF	O	Spindle servo forward output or spindle servo output; PWM
25	SPDRR	O	Spindle servo reverse output or spindle rotation forward/reverse changeover
26	RAA3	O	Address output to external D-RAM; ADR3
27	RAA2	O	Address output to external D-RAM; ADR2
28	RAA1	O	Address output to external D-RAM; ADR1
29	RAA0	O	Address output to external D-RAM; ADR0 (LSB)
30*	RAA10	O	Address output to external D-RAM; ADR10 (MSB)
31	VDD2	–	Power supply for DRAM interface

No.	Name	I/O	Description
32 36	RAA4 RAA8	O	Address output to external D-RAM; ADR4 Address output to external D-RAM; ADR8
37	RAOEX	O	Data output enable signal output to external D-RAM
38	DGND	–	Digital GND
39	RACASX	O	Column address strobe signal output to external D-RAM
40	RAD2	I/O	External D-RAM and data input/output; D2
41	RAD3	I/O	External D-RAM and data input/output; D3 (MSB)
42	RAA9	O	Address output to external D-RAM; ADR9
43	RARASX	O	Low address strobe signal output to external D-RAM
44	RAWEX	O	Data write enable signal output to external D-RAM
45	RAD1	I/O	External D-RAM and data input/output; D1
46	RAD0	I/O	External D-RAM and data input/output; D0 (LSB)
47*	TCRS	O	Track cross signal
48*	ACRCER	O	ADIP CRC error flag monitor output
49*	PLCK	O	EFM PLL clock output during Play
50	EFM0	O	EFM signal output during Record; C1F (C1 error flag) monitor output during Play.
51*	X700KO	O	Clock output; $f = 705.6\text{kHz}$; clock is not output when RSTX = 0.
52*	EXPORT0	O	Microcomputer extension output port 0
53*	EXPORT1	O	Microcomputer extension output port 1
54	TESO1	O	Microcomputer extension output port 2 during PLLR changeover
55	TEST3	I/O	Microcomputer extension output port 3 during PLLOSC changeover
56	TEST4	I/O	Microcomputer extension output port 4 during EXTCLK changeover
57	CDDATA	I/O	CD data input for high-speed dubbing; microcomputer extension port 5 during changeover
58	CDLRCK	I/O	CD LR clock input for high-speed dubbing; microcomputer extension port 6 during changeover
59	CDBCLK	I/O	CD bit clock input for high-speed dubbing; microcomputer extension port 7 during changeover
60	VXI	I	PLL clock input for varying pitch
61*	VPO	O	PLL phase error input for varying pitch
62	VDD1	–	Digital power supply
63	DGND	–	Digital GND
64	XI	I	Oscillation circuit input; 33.8688MHz
65	XO	O	

No.	Name	I/O	Description
66	DIN	I	Digital input signal
67	DOUT	O	Digital output signal
68	VDD3	–	Power supply for internal PLL
69	DGND	–	Digital GND
70	LRCK	O	Music data Lch/Rch changeover output
71	BCLK	O	Music data shift lock
72	DFCK	O	Clock for AD/DA converter digital filter; 256fs
73	ADDATA	I	Audio data input
74	DADATA	O	Audio data output
75*	FEMON	O	Focus error signal monitor output
76*	TOTMON	O	Total signal monitor output
77*	TEMON	O	Tracking error signal monitor output
78*	SBCK	I	DIN sub code readout clock; EIAJ CP-309 format
79*	SBO	O	DIN sub code serial data; EIAJ CP-309 format
80*	SBSY	O	DIN sub code block synchronization signal; EIAJ CP-309 format
81*	SFSY	O	DIN sub code frame synchronization signal; EIAJ CP-309 format
82	FOK	O	Focus OK detection signal; "0": Focus OK
83	SENSE	O	Servo status detection signal; "1": Auto Move/ Auto Jump/Auto Focus lead-in in progress
84	COUT	O	Track cross signal output
85	MCCK	O	Clock output for microcomputer; clock is output even when RSTX = 0.
86	DINTX	O	Interrupt Request output signal for system computer interface
87	VDD1	–	Digital power supply
88	DGND	–	Digital GND
89	RSTX	I	Tip reset input; reset with L (NOTE)
90	SYD0	I/O	System computer interface data bus terminal; (LSB)
91 96	SYD1 SYD6	I/O	System computer interface data bus terminal
97	SYD7	I/O	System computer interface data bus terminal; (MSB)
98	SYWRX	I	System computer interface register write pulse input
99	SYRDX	I	System computer interface register read pulse input
100	SYRS	I	System computer interface register select input

Terminals denoted with an asterisk (*) are (Open) terminals that are not externally connected.

NOTE) Set RSTX to "L" when the power is being turned ON or after it has been turned ON.

No.	Name	I/O	Description
1	G1/A1	O/O	Output terminals used jointly for the FDP timing signal (grid connection) and the segment signal (anode connection).
2	G0/A0		
3	NC	—	NC (connected to VDD)
4	PE0/INT0/EC0	I/I/I	Timer/counter external event input terminal
5	PE1/INT1/EC1		
6	PE2/INT2	I/I	External interrupt request input terminal
7	PE3/INT3/NMI	I/I/I	Nonmaskable interrupt request input terminal
8	PE4/RMC	I/I	Remote control reception circuit input terminal
9	PE5		
10	PE6/PWM	O/O	14 bit PWM output terminal
11	PE7/TO/ADJ	O/O/O	16 bit timer/counter rectangular waveform output, 32 kHz oscillation division output terminal
12 19	PC0/KR0 PC7/KR7	IO/I	Key return input terminal for performing of key scanning with the FDP segment signal
20	PB0/CINT	IO/I	External capture input terminal to the 16 bit timer/counter
21	PB1/CS0	I	Serial interface (CH0) chip select input terminal
22	PB2/SCK0	IO/IO	Serial clock (CH0) Input/Output terminal
23	PB3/SI0	IO/I	Serial data (CH0) input terminal
24	PB4/SO0	IO/O	Serial data (CH0) output terminal
25	PB5/SCK1	IO/IO	Serial clock (CH1) Input/Output terminal
26	PB6/SC1	IO/I	Serial data (CH1) input terminal
27	PB7/SO1	IO/O	Serial data (CH1) output terminal
28	AVREF	—	A/D converter reference voltage input terminal
29 36	PA0/AN0 PA7/AN7	I/O	A/D converter analog input terminal
37	AVss	—	A/D converter GND terminal
38	RST		System reset terminal, L: Active
39	EXTAL	I	System clock oscillation crystal connection terminal
40	XTAL	O	
41	Vss	—	GND terminal
42	TX	O	Crystal connection terminal for 32 kHz timer counter clock oscillation
43	TEX	I	
44	VDD	—	Positive power supply terminal
45	VFDP	—	FDP voltage supply terminal when the internal resistor is specified by the mask option.

No.	Name	I/O	Description
46 53	PD0/A55 PD7/A48	O/O	FDP segment signal (anode connection) output terminal
54 61	PF0/A47 PF7/A40		
62 69	PG0/A39 PG7/A32		
70 77	PH0/A31 PH7/A24		
78 85	A23 A16	O	
86 88	G15/A15 G13/A13	O/O	Output terminals for FDP timing signal (grid connection) and segment signal (anode connection)
89	VDD	—	Positive power supply terminal
90 100	G12/A12 G2/A2	O/O	Output terminals for FDP timing signal (grid connection) and segment signal (anode connection)

Note: The NC terminal of pin 3 must be connected to VDD. Connect the VDD terminals of pin 44 and pin 89 both to VDD.

29	TCGO	Track cross detection signal amp output terminal during groove output
30	WBO	Comparator output terminal for ADIP signal 2-value conversion
31	22KI	Comparator input terminal for ADIP signal 2-value conversion
32	22KO	ADIP signal HPF amp output terminal
33	ADLPFO	ADIP signal LPF amp output terminal
34*	NC	NC
35	ADIPO	ADIP signal preamp output terminal
36	ADIPI	ADIP signal AGC amp output terminal
37	ADAGC	Smoothing capacitor connection terminal for ADIP signal AGC
38	ADAGI	ADIP signal AGC amp input terminal
39	RF2-1	RF1, RF2 differential signal
40	EFMO	RF signal preamp output terminal
41*	EFMI	RF signal AGC amp output terminal
42	AVCC	Analog part power terminal
43	AGND	Analog part GND terminal
44	EFMAGC	Smoothing capacitor connection terminal for EFM signal AGC
45	EFMAGI	EFM signal AGC amp input terminal
46*	ATTR	Terminal for attenuating 47, 48 pin output signal
47	GOUT	Outputs RF1 + RF2 + RF3 – RF3 – RF4 signal during groove output
48	POUT	RF1 – 4 resistance addition output during pit output

Terminals denoted with an asterisk (*) are (Open) terminals that are not externally connected.

7.2 DIAGNOSIS

7.2.1 DISASSEMBLY

■ Removal of the Servo Mechanism Assy

- ① Remove the screw (A).
- ② Disconnect the connectors (CN102, CN103, CN105), open the hook of part A, and tilt the upper side of the CORE MAIN UNIT ASSY to the front.
- ③ Disconnect the connector (CN101) at the rear of the CORE MAIN UNIT ASSY and remove the CORE MAIN UNIT ASSY.
- ④ After the Carrier has been pushed in, move the Upper Slider to the rear and stop it at the position where the Under Slider starts to move.

- ⑤ Shift part B to the position shown in the figure while raising the Under Slider. (At the same time, the Upper Slider moves to the front.)
- ⑥ Remove the Lock Plate. (One screw (B))

- ⑦ Remove the Servo Mechanism Assy.

■ Caution for the time of installation of the servo mechanism assy

Move the MD Pick-up to the innermost circumference. After installation of the servo mechanism assembly, shift the Upper Slider to the rear. (The Under Slider moves at the same time, and the servo mechanism assy is fixed. When the Under Slider is slide, this becomes the reason for switching ring catching.)

■ Removal of the MD Pick-up

- ① Remove the MD Head. (One screw (A))
- ② Remove the Screw Guide at the lower side of the MD Pick-up. (One screw (B))
- ③ Remove the S. H. Spring. (One screw (C))
- ④ Remove the hook of the S. H. Spring as shown in the figure on the right.
- ⑤ Remove the Safety Screw.
- ⑥ Raise the left side of the Guide Shaft and pull it out to the left.
- ⑦ Remove the MD Pick-up. (With the front facing down, remove it to the front. At this time, the MD Pick-up can be removed more easily when the Reference Plate is removed.)

S. H. Spring

MD Pickup

■ MD Pick-up Installation

Perform installation in reverse order of the removal. (Please use care as the MD Head mounting screw can be crushed easily.

MD Head mounting screw tightening torque: 0.8 kg • cm

When the Reference Plate has been removed, confirm that the hook is engaged with the shaft of the spindle motor. (Take care that the mounting reference boss does not ride up.)

■ S. H. Spring Installation

Confirm from the rear that the tip of the hook is engaged sufficiently.

■ Removal of the Head Lifter

- ① Remove the Lifter SP.
- ② Tilt the Head Lifter to the rear and push part A to disengage it.

■ Head Lifter Installation

- ① Install part A in the Servo Base with the Head Lifter tilted to the back.
- ② Match the Head Lifter and the Servo Base as shown in the figure, and then engage part B.
- ③ While holding part B with your hand, tilt the Head Lifter to the front and install the Lifter SP.

7.2.2 DETAILS OF ERROR DISPLAY

Error Display	Details of Error	Measure
Can't REC	● DEFECT occurred 10 times continuously during REC-PLAY. ● Recordable cluster became 0 since DEFECT occurred during REC-PLAY. ● Address is unreadable. REC state can not be set for 20 seconds even after try again.	● Check if there are scratches, dusts, fingerprints, or black spots on disc. Check if disc fluctuates eccentrically or moves up and down largely.
Can't COPY	● Determined as follows according to the channel status of the signals input from D-IN during REC-PAUSE or REC-PLAY. 1. Other than audio 2. Other than consumer use 3. Copy NG due to inversion of COPY bit of CD	● Check if CD is copy-proof. (Example: CD-R, etc.)
D-IN UNLOCK	● The following occurred for digital signal input from D-IN during REC-PAUSE, REC-PLAY, or CD FUNC playback 1. Digital IN PLL unlocked. 2. Locked at other than FS = 32, 44.1 and 48 kHz.	● Check if D-IN signal line is normal.
TOC FULL	● No area for registering music number and character information during REC-PLAY (music name, disc number, etc.)	● Replace with recording/playback disc with space for registering UTOC.
UTOC R ERROR	● FTNO > LTNO. ● FTNO ≠ 0 or 1. ● UTOC recorded on DISC could not be read.	● Replace with other discs to check if UTOC data is normal.
UTOC ERR A	● Start address > End address.	● Replace with other discs to check if UTOC data is normal.
UTOC ERR L	● Any one data of UTOC 0 to 4 has looped.	● Replace with other discs to check if UTOC data is normal.

7.2.2 Details of Error Display

Error Display	Details of Error	Measure
NOT AUDIO	Data not for audio is recorded for TNO track mode currently selected.	Select other TNO or replace with other discs.
UNKNOWN DISC	- Data called MINI of system ID written in ASCII codes in TOC is incorrect. - Disc type written in TOC is not pre-mastered MD, recording MD, or hybrid MD.	Disc is outside specifications. Replace with different disc and check.
DISC FULL	No recordable space when attempted to set REC-PAUSE.	Replace with different disc with recording space.
PREMASTERED	Disc only for playback was loaded when attempted to set REC-PAUSE or edit.	Disc is for playback only. Replace with disc for recording.
PROTECTED	- Attempted to record or edit even through REC-proof knob of disc for recording was in the REC-proof state. - Attempted to edit track with write-protect according to information on UTOC.	- Track attempted to be edited is write-protected. Try again with different track. - Restore the REC-proof knob and try again.
Can' t EDIT	Editing conditions were not satisfied for each editing function.	Operating method is wrong. Try again using correct method.
TEMP OVER	Temperature inside unit (MD unit) was too high due to fault.	Check according to TROUBLESHOOTING.
DISC ERR [DISC ERR R DISC ERR S DISC ERR W]	- Data read was incorrect or could not be read properly. - Error occurred during music data recording and recording could not be performed correctly. - Music data READ search time exceeded - REC PAUSE shift abnormality (search time exceeded) - SD WRITE (search time exceeded)	Faulty TOC or UTOC data or scratch on disc. Replaced with other discs.
UNKNOWN DISC	TOC read was incorrect or could not be read properly.	- The TOC data recorded on the disc do not comply with MD Standards, so try using another disc. - The disc may be scratched or damaged, so try using another disc.
UTOC W ERR	Fault occurred during rewriting of UTOC rewriting, and rewriting could not be performed correctly.	Scratch on disc. Replaced with other discs.
UNKNOWN DISC	Inserted a disc but could not bring in FOCUS.	Check if there are scratches, dusts, fingerprints, or black spots on disc. Check if disc fluctuates eccentrically or moves up and down largely.
MEMORY FULL	The DRAM has become filled with music data, but they can not be written (to the disc).	Check if there are scratches, dusts, fingerprints, or black spots on disc. Check if disc fluctuates eccentrically or moves up and down largely.
BLANK MD	After reading UTOC, total number of TNO and NAME characters was 0.	Record and check if disc is recordable.
DEFECT	Focus execution error, etc. occurred due to shock during REC-PLAY.	Check if there are scratches, dusts, fingerprints, or black spots on disc. Check if disc fluctuates eccentrically or moves up and down largely.
UTOC W ERROR	UTOC read was correct but could not be rewrite it.	Check to see if the recording head contact is correct or if there are any disconnections between the board and the recording head.
EEPROM ERROR	The EEPROM data are incorrect.	Try doing a RESET operation again. If the problem still persists, replace the EEPROM.
MECHA ERROR	- Never completes EJECT. - Never moves HEAD UP. - Never moves HEAD DOWN. - The set microcomputer and MD mechanism microcomputer are not communicating properly.

8. PANEL FACILITIES AND SPECIFICATIONS

■ PANEL FACILITIES

Main unit front panel

- | | | |
|-----------------------|------------------------------|-----------------------------|
| 1 POWER switch | 11 EDIT/NO button | 21 Play (▶) button |
| 2 STANDBY indicator | 12 NAME button | 22 Fast forward (▶▶) button |
| 3 TIMER switch | 13 INPUT SELECTOR switch | 23 Fast reverse (◀◀) button |
| 4 DIGITAL NR button | 14 REC LEVEL control | 24 Remote control sensor |
| 5 REPEAT button | 15 SYNCHRO REC button | 25 DISPLAY/CHARA button |
| 6 A-B button | 16 Record (●) button | 26 NAME CLIP button |
| 7 TIME SKIP button | 17 Headphones volume control | 27 REC MODE button |
| 8 MD insertion slot | 18 PHONES jack | 28 PLAY MODE button |
| 9 MD eject (▲) button | 19 Stop (■) button | |
| 10 Jog dial | 20 Pause () button | |

Main unit rear panel

- | |
|---|
| 1 Audio input jacks |
| 2 Audio output jacks |
| 3 Digital input jack (Coaxial) |
| 4 Digital input jack (Optical) |
| 5 Digital output jacks (Optical) |
| 6 Control input jack (U.S. model only) |
| 7 Control output jack (U.S. model only) |

● To connect to equipment with the Pioneer mark (U.S. model only)

Use a commercially available miniplug cord (without load) to connect the CONTROL IN jack of this unit to the CONTROL OUT jack of equipment with the  mark. This allows you intensified control of the system.

- When this unit is connected for system control, this unit cannot be controlled directly with the remote control unit.
- For further details, refer to the operating instructions of the equipment connected to this unit.

Display window

- 1 Indicate that disc data as shown in the display has been selected.
- 2 Indicates long-hour recording in monaural.
- 3 Indicates that the auto mark function is set.
- 4 Indicates that the space cut function is active.
- 5 Shows a function or disc/track name.
- 6 Indicates sync recording.
- 7 Indicates the editing setting fine-adjustment mode.
- 8 Indicates that the total play time of the disc is displayed.
- 9 Shows the remaining time for playback or recording.
- 10 The indicators corresponding to the track numbers existing in the disc light up.
- 11 Indicates that the disc has more than 26 tracks.
- 12 Indicates the repeat play mode.
- 13 Indicates the fade play mode.
- 14 Indicates the medley play mode.
- 15 Indicates the random play mode.
- 16 Indicates that the time skip function is active.
- 17 Indicates the program play mode.
- 18 Indicates that 2 points, A and B, have been selected to set a section.
- 19 Indicates the record mode.
- 20 Indicates the play mode.
- 21 Indicates the pause mode.
- 22 Indicates digital input recording of the coaxial input.
- 23 Indicates digital input recording of an optical input.
- 24 Indicates analog input recording.
- 25 Indicates that the digital volume control function is active.
- 26 Indicates that the digital NR function is active.
- 27 Indicates that recording or editing has been performed.
- 28 Indicates that time information is selected as shown in the display section.
- 29 Indicates that the track data as shown in the display has been selected.

Message Shown on the Display	Description
N o D i s c	No disc has been loaded.
L o a d i n g	A disc is loading.
E j e c t	A disc is being ejected.
B l a n k D i s c	The loaded disc is a blank disc.
P o w e r o n	The internal mechanism is being initialized.
D i s c E n d	The end of disc is reached during playback .
T O C R e a d i n g	The TOC data is being read.
U T O C W r i t i n g	The UTOC data is being written.
A n a l o g	The analog input is selected with the INPUT SELECTOR switch.
C o a x i a l	The coaxial digital input is selected with the INPUT SELECTOR switch.
O p t i c a l	The optical digital input is selected with the INPUT SELECTOR switch.
N a m e O v e r	The number of characters would exceed 100 if a name is copied using the name clip function.
N o t C l i p p e d	Copy using the name clip function is attempted while there is no name stored in memory.
R e h e a r s a l	The rehearsal mode for fine-adjustment of settings is selected during editing.
C o m p l e t e	An editing operation has been completed successfully.
C a n ' t E d i t	An editing operation has not been completed.

■ SPECIFICATIONS

Type Mini Disc digital audio system
Recording system Field modulation overwrite system
Reproduce system Non-contact optical readout
Sampling frequencies 44.1 kHz
Frequency response 8 Hz to 20 kHz
S/N ratio 101 dB
Wow & flutter Below measurable limit

Power requirements	
U.S. model	AC 120 V/60 Hz
European and U.K. models	AC 220 - 230 V, 50/60 Hz
Power consumption	15 W
Dimensions	420(W) x 105(H) x 294(D) mm (16-9/16 x 4-2/16 x 11-9/16 in)
Main unit weight	3.9 kg (8 lb 9 oz)

Line input jacks RCA PIN x2 ; reference input level 500mV
(input impedance 50 k Ω)

Line output jacks RCA PIN x2 ; reference output level 500mV
(input impedance 1 k Ω)

Headphone output jack 1.8mW
(volume max. , load impedance 32 Ω)

Coaxial input terminal RCA PIN ; 0.5 Vp-p
(input impedance 75 Ω)

Optical input terminal x1

Optical output terminal x1

Accessories

Warranty card	x 1
Operating Instructions (this manual)	x 1
Audio cord	x 2
Remote control unit	x 1
batteries (AA/R6P)	x 2

NOTE:

Specifications and design subject to possible modification without notice, due to improvements.

US and foreign patents licensed from Dolby Laboratories Licensing Corporation.

MAINTENANCE OF EXTERNAL SURFACES

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surfaces are very dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleaners.
- Never use thinners, benzene, insecticide sprays and other chemicals on or near this unit, since these will corrode the surfaces.

Accessories

Remote control unit
CU-MJ011 (RPX1131)

Batteries (AA/R6P) x 2
(VEM-013)

Audio cord x 2
(PDE1248) (L = 1m)

The Art of Entertainment

ORDER NO.
RRV2002

MINIDISC RECORDER

MJ-D707

- Refer to the service manual RRV1963 for MJ-D707/MY.

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Type	Model	Power Requirement	Remarks
	MJ-D707		
NV	○	AC230V	

CONTRAST OF MISCELLANEOUS PARTS

NOTES :

- Parts marked by “ NSP ” are generally unavailable because they are not in our Master Spare Parts List.
- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screw adjacent to ▼ mark on the product are used for disassembly.
- Reference Nos. indicate the pages and Nos. in the service manual for the base model.

■ CONTRAST TABLE

MJ-D707/NV and MY are constructed the same except for the following:
